

Electric machine for wax molding

Ref: MMC001

The electric wax molding machine is used to shape beeswax into different shapes and sizes. It is a useful tool for beekeepers who want to create their own custom wax molds for use in their hives. The machine heats the wax until it is soft enough to be molded into different shapes, such as honeycombs, hive covers, etc. The molded wax can be used to build new honeycombs or to repair existing ones. The electric wax molding machine is an essential tool for beekeepers who want to have full control over the process of creating honeycombs and other beeswax products.
